SUMMARY

Software Engineer with a proven ability to lead and deliver complex, user-centric systems from concept to deployment, as demonstrated by the graduation project RoadK, a full-stack mobile application built with Flutter and Firebase. Combines hands-on expertise in back-end development (C#, .NET Core) with data analysis skills (Python, Power BI, SQL) to build scalable, data-informed solutions. Passionate about leveraging AI technologies to solve real-world problems, with recognized success in national tech hackathons.

WORK EXPERIENCE

Data Analysis Intern (Parachute16 – Amman, Jordan)

Sep 2025 – Dec 2025

- Performed data extraction, cleaning, and preprocessing tasks using Python to prepare datasets for analysis.
- Built interactive data visualizations and reports in Power BI to present insights and trends effectively.
- Wrote and optimized SQL queries to retrieve, filter, and aggregate data from relational databases.
- Applied exploratory data analysis techniques to uncover patterns and support decision-making.

Back-End Development Intern (Sky Software – Amman, Jordan)

Dec 2024 – Apr 2025

- Developed and documented RESTful APIs using ASP.NET Core and C#.
- Designed and optimized relational database schemas in SQL Server, implementing data access with Entity Framework Core (Fluent API).
- Applied Clean Architecture principles and collaborated using Git-based CI workflows.
- Contributed to production-level systems, including:
 - Employee Vacation Workflow System: Automated multi-step leave approval processes.
 - Bidding Management System: Implemented tender creation, submission, and evaluation with role-based access control.

PROJECTS

RoadK – Infrastructure Reporting Mobile App (Flutter, Dart, Firebase, Figma)

- Led the design and development of a dual-role application for citizens and municipal admins within a single codebase.
- Implemented real-time report tracking, push notifications, and a gamified leaderboard using Firebase services (Firestore, Auth, Cloud Messaging).
- Applied full software development lifecycle: requirements analysis, UML design, iterative development (Agile), and comprehensive testing.

Eshara – AI-Powered Sign Language Translation System (Python, AI Model Training, ASP.NET MVC)

- Achieved 8th national ranking (Build with AI Hackathon 2025) for the initial prototype.
 - Post-hackathon, rebuilt the system using ASP.NET MVC, enhancing code structure, scalability, and model accuracy through expanded dataset training.
-

SKILLS

- Languages: C#, Java, Dart, Python, SQL, JavaScript
 - Frameworks: ASP.NET Core, Entity Framework Core, Flutter, JDBC
 - Databases: SQL Server, Firebase (Firestore), MySQL, SQLite
 - Data & BI Tools: Python (Pandas, NumPy), Power BI, EDA, Data Visualization
 - Tools & Methods: Git, RESTful APIs, Clean Architecture, Agile/Scrum, CI/CD, Figma, Draw.io
- Core Competencies: Problem Solving, Back-End/Full-Stack Development, System Design, Mobile Development, Project Management
-

EDUCATION

B.Sc. in Software Engineering | Zarqa University

- Graduated: 2026

Relevant Coursework & Achievement:

- Algorithms & Data Structures, OOP (Java), Database Systems, Web Development.
